This Syllabus is brought to you for free and open access by the Lehman College at CUNY Academic Works. It has been accepted for inclusion in Open Educational Resources by an authorized administrator of CUNY Academic Works. For more information, please contact AcademicWorks@cuny.edu.
INSTRUCTOR INFORMATION

INSTRUCTOR: Alexander Núñez-Torres, Ph.D.
POSITION: Assistant Professor
OFFICE: Carman Hall, Room 368
OFFICE HOURS: Tuesday and Thursday: 4PM to 5PM, by appointment
PHONE: 718-960-8296
EMAIL: Alexander.nuneztorres@lehman.cuny.edu

COURSE INFORMATION

COURSE NUMBER - SECTION: ECO 166 - D301
TITLE: Introduction to Macroeconomics
CREDITS UNITS: Three Units
CAREER: Undergraduate

COURSE ARRANGEMENT:
Tuesday and Thursday: 12:30 PM to 1:45 PM
Carman Hall, Room 335

COURSE DESCRIPTION:
National income components and their measurement, unemployment rate, and price levels. Determinants of aggregate demand and output. Effects of government spending, taxation, and monetary policy on national income, employment, and the rate of inflation.

NOTE: Students may not receive credit for both ECO 166 and BBA 168.

Unless otherwise noted, this work is licensed under a Creative Commons Attribution-NonCommercial-ShareAlike 4.0 International License.
COURSE TOPICS:

1- Welcome to economics
   In this lecture we are going to review the key reasons to study economics. We are going to establish the differences between micro and macroeconomics and the method of economics and economic policies. Then we are going to discuss how theories and models are used.

2- Choice in a world of scarcity
   In this short lecture, after understanding the concept of macroeconomics, and establishing its distinctions with microeconomics, we are going to discuss scarcity, choice, opportunity costs and the economic problem. Furthermore, we are going to introduce the role of the government in the macroeconomic environment.

3- Demand, Supply and the Market Equilibrium
   After the introduction to economics and the scarcity problem we are going to study the roles of firms, entrepreneurs and households in the market and the circular flow. Moreover, we are going to discuss the demand and supply in product/output markets and market equilibrium. Finally, we will define the concept of efficiency in a market equilibrium.

4- The Macroeconomic Perspective I
   After we know about supply, demand, market equilibrium, and we grasp the concepts of scarcity and choice, we are going to discuss the determinants of total national output, the macroeconomic concerns and the role of the government in the economy. We are going to conclude with a brief history of macroeconomics for the United States.

5- The Macroeconomic Perspective II
   The Gross Domestic Product (GDP) is one of the most widely used measures of an economy’s output or production. GDP is the total value of all final goods and services produced by a country within a given period. We are going to learn how to calculate GDP by both the expenditure and income approach in a given period. Then, we are going to discuss and understand the concepts of Nominal and Real GDP. Finally, we are going to talk about the limitations of the GDP concept and the differences between nominal versus real GDP.

6- Unemployment, Inflation and Long-run Growth
   Unemployment, inflation and long-run growth are three key variables to measure economic well-being. In our path of learning to assess the health of the economy we are going to study the concepts regarding employment and inflation, their components, and how to measure them in a given period. Finally, we are going to discuss the social and economic costs of unemployment and inflation.
7- **The Core of Macroeconomic Theory I**
   The following lectures present the current understanding of how market economies work. In this part of the course we will study the macroeconomic theory. We will learn the macroeconomics perspectives on Demand and supply, principles of the Keynesian (demand) and neoclassical (supply) macroeconomic theories and explain how they differ.

8- **The Core of Macroeconomic Theory II**
   The fundamental ideas of Keynesian economics were developed before the AD/AS model was popularized. From the 1930s until the 1970s, Keynesian economics was usually explained with a different model, known as the expenditure-output approach. This approach is strongly rooted in the fundamental assumptions of Keynesian economics: it focuses on the total amount of spending in the economy, with no explicit mention of aggregate supply or of the price level. We will learn the principles of the Keynesian theory of consumption and explain how equilibrium output is determined. Finally, we are going to describe the multiplier process to calculate changes in equilibrium.

9- **Fiscal Policy and its effects on the economy**
   After learning how to calculate equilibrium output and the multiplier process, we arrive at one of the most important influences in the economy: The government and its fiscal policy. We are going to discuss the government introduced multipliers and their effect on the economy (on the equilibrium output), as well as the influence of the economy on the government budget.

10- **Monetary Policy, the Federal Reserve and its effects on the economy**
   What is money? How money is created? What is the role of money in the economy? In this lecture we are going to study the forces that determine the supply of money and how banks interact with the Federal Reserve (Fed) to create money. Finally, we are going to discuss the Fed activities before and after 2008.

11- **The Balance of payments, Exchange Rates and Aggregate Expenditure**
   Until this point in the course we have assumed a closed economy to the world, this is not the case. In this lecture we explore the ways in which the openness of the economy affects macroeconomic policy making.

12- **Special Topic: 2008 Financial crisis**
   Given the financial crisis, the mortgage crisis, the lingering unemployment situation, new responsibilities of the Federal Reserve, benefits of the stimulus package and so on, this is the perfect time to talk about the 2008 financial crisis. In this short lecture, we are going to discuss how the different causes of the 2008 financial crisis and its consequences to the world economy.
COURSE OBJECTIVES:
Upon successful completion of this course, the student will be able to:

- Discuss the concerns of macroeconomics and the interactions of its components. Review the macroeconomic history of the United States.
- Describe the Gross Domestic Product (GDP) fundamentals, the methods of calculating GDP and its limitations in measuring well-being.
- Explain unemployment, the tools to measure it and the costs and effects of inflation.
- Discuss the principles of the Keynesian theory of consumption, its relationship with planned and actual investment. Describe and calculate the equilibrium output and the multiplier process.
- Discuss the influence of fiscal and monetary policies on the economy and its multipliers. Explain the influence of the economy on the government budget.
- Define money and explain how banks create money. Describe the functions and structure of the Federal Reserve System. Understand how the Fed can change the interest rate.
- Discuss Globalization, Balance of Payments and Exchange rates.

REQUIRED OPEN TEXTBOOK:

URL: https://openstax.org/details/books/principles-macroeconomics-2e

USE OF TECHNOLOGY: BLACKBOARD AND LEHMAN EMAIL:

We use Blackboard to post important course-related documents and materials such as the course syllabus (and any updates or changes to the syllabus), submitting assignments and solutions to the recommended (suggested) homework (practice) problems. Blackboard can be accessed through the Lehman College website: www.lehman.cuny.edu.

Since Blackboard is automatically linked to your Lehman College email account, and will serve as the principal method to communicate outside the classroom, students are expected to check Blackboard and their Lehman College email account on a regular basis.

If you have any questions about Blackboard and your Lehman College email account or your password, or if you have any problems accessing the site please call the computer helpdesk at 718-960-1111.
GRADING POLICY:
Grades will be determined by the following criteria:

- **Attendance 5%:**
  Attendance is required (see Attendance policy from student book). Every class day the professor will call your name in the first 10 minutes of class. If you arrive after your name is called, your attendance for that day will count as a half point (0.5) instead of one. The final grade on attendance correspond to the cumulative sum of the points the student obtained given throughout the course, divided by the total amount of cumulative points possible.

- **Assignments and Homework 40%:**
  All the assignments are in groups of three to five people to encourage discussion. First assignment will be a presentation of the economic indicators of a selected country, and all the remaining ones will be selected problems and review questions from the textbook.

Homework projects have two equally weighted parts: submitting the assignment at the due date (50%), and participating in the review of the homework (50%). If the student fails to attend to the homework review, the 50% score of the homework assignment will be added to the corresponding exam. Every homework project is in groups of three or four students and at least one member of each group is required to solve one of the problems on the board. 10% will be deducted for each day the assignment is overdue. (All assignment will be submitted via blackboard and are due before 11:59pm of their respective assigned date). Keep in mind that the cumulative value of the assignments is 40% of your final grade.

- **Exams 55%:**
  Exams are based on the assigned course readings, lectures and supplemental materials related to the course. A total of FOUR exams will be assigned for this class. **ALL Exams will be administered in-person (i.e. on the Lehman College Campus).** You are required to bring a calculator to all the exams, other electronic devices are not permitted as calculators. The dates of the Exams are the following:

  EXAM 1: Thursday, February 22nd
  EXAM 2: Tuesday, March 27th
  EXAM 3: Thursday, April 26th
  EXAM 4: To be determined by Registrar Office

Each exam is equally weighted when calculating the final distribution of the course grade. **The lowest performing grade will be dropped from calculation of the final course grade.** That is, the three highest performing grades. Unless informed
otherwise, **taking all the exams is required**, if you don’t attend to one of the exams, you will receive a 0 and that score will count for the calculation of your final grade. Because the lowest performing grade in the course is dropped, **no make-up exams nor additional assignments** will be administered for students who did not complete an exam, or participated in an assignment.

If a student possesses a well-justified and evidenced reason to not complete an exam during its scheduled time, then the professor may consider an exception and grant the student the opportunity to take a make-up exam. Nevertheless, the make-up exam will be different from the previously administered exam and the student’s final course grade will then be calculated as the equally weighted average of the four exams; e.g. the lowest performing grade in the course will NOT be dropped from the calculation of the final course grade.

ACCOMMODATING DISABILITIES:
Lehman College is committed to providing access to all programs and curricula to all students. Students with disabilities who may need classroom accommodations are encouraged to register with the Office of Student Disability Services. For more information, please contact the Office of Student Disability Services, Shuster Hall, Room 238, phone number, 718-960-8441.

ATTENDANCE POLICY (FROM STUDENT HANDBOOK)
Students are expected to attend classes regularly, and instructors are required to record attendance for grading and counseling purposes. Individual instructors, as well as departments or degree programs, may establish specific attendance requirements. Instructors have the right to weigh attendance and class participation in determining grades. It is the student’s responsibility to ascertain the effect attendance may have on the grade in a course. Students receiving financial aid must be certified as attending classes regularly for continuing eligibility.

ACADEMIC CENTER FOR EXCELLENCE (ACE) & SCIENCE LEARNING CENTER (SLC)
The Academic Center for Excellence (ACE) and the Science Learning Center (SLC) are two of the tutoring centers on campus. The ACE provides appointment based and drop-in tutoring in the humanities, social sciences, and writing, as well as general writing and academic skills workshops. The SLC provides drop-in tutoring for natural and computer science courses. To obtain more information about the ACE and the SLC, please visit their website at http://www.lehman.edu/issp or please a call to the ACE at 718-960-8175, and the SLC at 718-960-7707.

ACADEMIC INTEGRITY AND PLAGIARISM POLICY
Statement may be found in student handbook. For more information, refer to http://www.lehman.cuny.edu/student-affairs/documents/student-handbook-02.pdf. While students are encouraged to work together in solving most of the class assignments, each student needs to hand in their individual work to receive a full grade. Being caught cheating in an exam will result in a score of 0% in the exam and/or a final grade for the course of “F”.

SPECIFIC POLICIES
The instructor will be very respectful with each student. The same is expected from each student to all other classmates and to the instructor. **The use of laptops for activities unrelated to the course is not allowed during class.** Please **turn off** your cell phones during class.
