Radio

Continued from Page 1

The safety concern is that if information is delayed to the EFD from other agencies, the SIUE police will not be prepared to handle the situation. Sometimes, when people are being detained to the艾滋病 like it would be for a digital radio system, there is a 15-minute time gap between the person out on the street and the officer who goes to the scene. The EPD can’t directly communicate with surrounding agencies like the St. Clair County Sheriff’s Department or other police agencies.

Although Bullen mentioned that following the approval of these digital frequencies, the SIUE police would be able to access area police departments’ digital systems, the potential for communication is still limited.

Chief Rick Welte joined the discussion and said he is also in favor of the digital frequencies for improving communication.

However, the agreement will allow the software for the radios to come into play statewide, not just the SIUE police.

Former SIUE Board of Trustees Chairman Edward Stewart said, “I would very much encourage the SIUE police department to take advantage of this once in 25 years’ opportunity.”

The discussions came to a close and the motion was approved. The Council encouraged the EFD to use the funds in their budget for this purchase.

Although the radios will be purchased following this approval, they will not be available for the budget period that ends on May 31.

“More space means more safety — but not more in our classrooms,” Altena Art Riesie said the radios are just one part of the overall purchase.
