**African Market**

Continued from Page 1

The African Market of Hope also offers women training in these areas: weaving, tailoring, and knitting essays on how to maintain a house and get along with their traditions. If so, they can contribute to the welfare of their families, working for the betterment of their communities.

The problems in Zambia are similar to those found elsewhere in Africa, with many people living in poverty and lacking access to basic services. According to information from the United Nations, the country has a population of 18 million people and 80% of the population are subsistence farmers. The official language is English and the majority of the population is Christian.

The African Vision of Hope was established in 2002 with a goal of providing education and support to the children and families in the region. The organization has grown over the years, and today it serves more than 900 students and their families.

The organization offers a range of programs, including educational support, vocational training, and health care. They also have a project called the “African Vision of Hope Village,” which is a community where students and their families can live together and receive support.

The future of the organization is uncertain due to funding issues. They rely on donations from individuals and organizations to support their programs. They encourage others to support their cause by donating or volunteering.

**Urbana, B. (AP) — Ameren Illinois is using drones to detect power outages, improve response times, and reduce costs. The company is working with drone technology companies to conduct flights in various parts of the state. They say the drones can help them quickly identify and repair power outages, which is important during times of high demand such asstorms and hot weather.**
