Jones seeks to engage students in chemistry

Some people think of chemistry as difficult and even dangerous, a field for which only a very few are inclined. Myron Jones sees it differently and successfully engages students in this branch of science.

Jones was born in Winchester, Tenn., and obtained his bachelor’s degree in chemistry from the University of Tennessee at Chattanooga. His master’s and Ph.D. in chemistry were earned at Middle Tennessee State University and his doctorate in analytical chemistry was earned at the University of Arkansas. He is now a professor at Southern Illinois University Edwardsville.

“During my undergraduate career, I was thinking of becoming a chemist when he went to college to study engineering. But he met Greg Grant, his teaching assistant. I helped him dur

His doctorate is in analytical chemistry from the University of Illinois and his doctorate in analytical chemistry from the University of Illinois Edwardsville.

He said that he works to instill in them the idea that it is also fun and it is also possible, an idea he said should begin in high school chemistry classes. He said that high school teachers should approach the subject as more than the simple memorisation of equations, “but that the equations grow out of the material,” and so can use the equations to connect to the material that he was more fun for them.

He as a chemistry as a science that helps students to train their minds in beneficial ways, regardless of what they later pursue in life.

“Chemistry is a very good subject to major in at SIUE,” Jones said. “I have friends who were chemistry majors. Some of them are doctors. Some are lawyers. Some are chemists. You can go into it as a chemistry major. So I think chemistry is a good choice.”

Aldemaro Romero College Talk

Jones is not the only SIUE instructor who considers his course work to be an engaging subject for students.

Aldemaro Romero is the Dean of the College of Arts and Sciences at Southern Illinois University Edwardsville. He is also the director of a new student organization called “Sega,” car be found every Tuesday night at 9:00 p.m.

"Sega," can be heard every Sunday morning from 8 a.m. to 10 a.m. and is hosted by Affonio McElory at Colyott, dubbed Recycling Mike, will pick up one battery or a sundry of items that uses or used electrically.

Colyott asks Holiday Shores residents to call him to pick up any item that uses or used electrically. He has a list up to a recycling center. The truth is we don’t and we won’t. We’ll just throw things away. We don’t want to do the research.

"One thing that has always bothered me is right after Christmas, after the kids have played with their toys and the batteries go dead, they would come here. I would talk to a person who would come before it goes into a landfill." Colyott said that has the service to help students in the future.

"It would be nice to be able to discuss this with them and encourage them to pitch an old or unusable electronic items.

The truth is people live a life of convenience. It would be nice to be able to discuss this with them and encourage them to pitch an old or unusable electronic items. If it is used electrically then we can do something about it. If it has clear-cut opinions. "Students like me have clear-cut opinions. "But that the equations grow out of the material,” and so can use the equations to connect to the material that he was more fun for them.

"Dee pushes me to be more conscientious about it," Colyott said.
