In December 2014, Student Monitor, a market research company, conducted a study about the drinking habits of American college students. The study revealed that the majority of these students drink alcohol, with the majority of them doing so on a monthly basis. A significant number of students also reported engaging in binge drinking, which is defined as consuming five or more drinks per day for males and four or more drinks per day for females. The study also found that the majority of students who drink alcohol do so for social reasons, such as to relax or to celebrate special occasions.

Based on a survey of 1,210 students in 10 different colleges conducted last fall, the study found that for almost every type of college student pre- fer to drink alcohol, including students who are involved in campus activities and those who are not. The survey also revealed that the majority of students who drink alcohol do so for social reasons, such as to relax or to celebrate special occasions. They are not drinking to the point of intoxication, but rather as a way to socialize and have fun with friends.

In the meantime, the Pennsylvania State University’s Center for the Study of Collegiate Drinking (PSCD) has released its annual report on college drinking trends. The report found that college students are drinking less than they did in previous years. The PSCD report also found that the majority of college students who drink alcohol do so for social reasons, such as to relax or to celebrate special occasions. They are not drinking to the point of intoxication, but rather as a way to socialize and have fun with friends.

In conclusion, the study and the PSCD report both indicate that college students are drinking less than they did in previous years. This is likely due to a combination of factors, including increased awareness of the dangers of alcohol abuse and the availability of alternative social activities. However, it is important to note that the majority of college students who drink alcohol do so for social reasons, such as to relax or to celebrate special occasions. They are not drinking to the point of intoxication, but rather as a way to socialize and have fun with friends.
