

## Python string homework assignment

We got a message from our secret partner about a very likely stock price changes at several big tech companies in the next few days. We would like to use this information, but by some accident there was a glitch in the message transaction and some letters were missed and replaced with some random symbols! Luckily we were able to establish that letters 'w' are missing, and the last word was "percent" - it got truncated to only one letter 'p'.

Here are the 5 messages we got:

```
a = "Apple    do$n 9 p"  
b = "Google  do&n 6 p"  
c = "IBM     do%n 3 p"  
d = "Tesla   do-n 10 p"  
e = "Facebook do=n 2 p"
```

- you can see that it is easy to fix them!  
All the 'w's are missing at the same position in every message.  
And the word 'percent' is truncated at the end.

Put the instructions in Python below to fix the messages above:

You can check if your code works by printing all the messages afterwards:

```
print(a)
print(b)
print(c)
print(d)
print(e)
```

This is what should be displayed as the result of the `print` statements:

```
Apple    down 9 percent
Google   down 6 percent
IBM      down 3 percent
Tesla    down 10 percent
Facebook down 2 percent
```
