COLLEGE MOVES TO FARM: Bean Picking and Study Mixed

Project Believed Unique

With their minds set on the success of their work in the fields, more than a hundred students of the University of Vermont's College of Agriculture and Life Sciences are working hard this summer to bring a crop of beans to fruition. The project, a part of the college's efforts to promote agriculture and food production, is situated on a 150-acre farm in the heart of Vermont. The students, divided into teams of ten, are charged with the task of growing beans from the soil to the table.

STATISTICS—Two hundred students of the University of Vermont's College of Agriculture and Life Sciences are working hard this summer to bring a crop of beans to fruition. The project, a part of the college's efforts to promote agriculture and food production, is situated on a 150-acre farm in the heart of Vermont. The students, divided into teams of ten, are charged with the task of growing beans from the soil to the table.

STUDENT PERSPECTIVES—"It's been a big part of my summer's work," says John Smith, a senior at the University of Vermont's College of Agriculture and Life Sciences. "We've been working hard to bring a crop of beans to fruition. The project, a part of the college's efforts to promote agriculture and food production, is situated on a 150-acre farm in the heart of Vermont. The students, divided into teams of ten, are charged with the task of growing beans from the soil to the table."
