Collecting & Infusing Locally Relevant Video to Support Teacher Learning

Leslie Lieman, Educational Technology Coordinator, School of Education

1. Identify value of targeted review of teaching videos
   - Analyze lessons in depth. The ability to view parts of a lesson more than once via video permits in-depth analysis and reflection in a way that direct observation does not.
   - Evaluate particular approaches. Targeted video recording can promote understanding of new or specific techniques and strategies.

2. Key Instructional Practices
   - Demonstrate/include key instructional practices that will specifically support rubric areas in the edTPA. For example:
     - Organization and Rapport
     - Active learning
     - Differentiation
     - Child Observation
     - Reengagement
     - Assessment
     - ELL Instruction
     - Learning Differences
     - Literacy Modules
     - Specific content determined after viewing videotapes
     - Math Modules
     - Specific content determined after viewing videotapes

3. Edit video into lesson plan “chunks,” which range from 10-minute sections to 2-5 minute moments.

4. Develop online modules with tasks and assignments that support candidate observation skills and improves analysis of teaching practice.

   - Design modules in a Blackboard organization so they can be utilized and scaffolded across our teacher education programs.

5. Future plans include inviting more School of Education faculty to view the videos for the purpose of implementing them in a variety of meaningful ways in coursework.

6 teachers and 2 literacy coaches from our Bronx public school PDS classrooms welcomed us to videotape teaching and student learning. Teachers and Lehman College faculty liaisons collected student consent forms, organized lesson plans, collected student work and allowed a Lehman College video team (Bronx Net funded by MATH-UP) into classrooms for 1 – 3 lessons in a unit. We’ve collected approximately 55 hours of video footage.

Context:
Although online teaching videos are easy to find, few demonstrate locally relevant models for our aspiring teachers. Lehman College School of Education began a project in Fall 2014 to collect locally relevant video of teaching and student learning to demonstrate key practices in the field. We identified classrooms of highly competent program graduates as well as Professional Development Network Schools (PDS) teachers working in classrooms with co-teaching models and/or work with English Language Learners.

Project Team

- Leslie Lieman, Educational Technology Coordinator
- Laura Baecher, Associate Professor, Hunter College
- Nancy Dubetz, Associate Professor, Childhood Education
- Showkat Ali, College Assistant
- Crystal Negron, College Assistant
- Aliex Ross, Associate Professor, Childhood Education
- Jeanne Peloso, Assistant Professor, Childhood Education
- Lehman Alumni and Cooperating Teachers: TeSean Fleming, PS 304/Grade 4 and Erin Settani, PS 304/Grade 5
